About this report

This report provides information about how [redacted] van Kampen performed on the Logiks General (Advanced) test. The information provided in this report is confidential and int d only for use by trained test administrators.

About the test

The Logiks General (Advanced) test has been designed to quickly and accurately assess an individual's general ability. The test contains verbal, numerical and abstract questions which are presented in three separately timed sections.

The test is item-banked, meaning that each candidate is presented with a different set of questions. Each test is balanced for difficulty to ensure assessment is reliable and fair.

In addition to providing information regarding the respondent's general mental ability, the report also provides information regarding test taking style:

- **Speed** is the number of questions attempted.
- **Accuracy** is the percentage of questions answered correctly, out of the number of questions attempted.

Important notes

When reading this report, please be aware of the following points:

- If the test was taken under unsupervised test conditions, it is advisable to re-test the candidate in a supervised setting.
- Ability can improve with practice, training and development. Therefore, if more than 12 months have elapsed since the respondent took the assessment, the individual should be asked to complete the test again.

Interpretation

The test results are interpreted by comparing them with the results obtained from a large group of people who have also completed the Logiks General (Advanced) test (a norm group). For this report, the norm group used for comparison was:

Belgium (General) 1.0

Measurement error may mean that the candidate's true, or actual, scores are slightly higher or lower than those obtained on the Logiks General (Advanced) test. Please bear this in mind when reading the results overleaf.

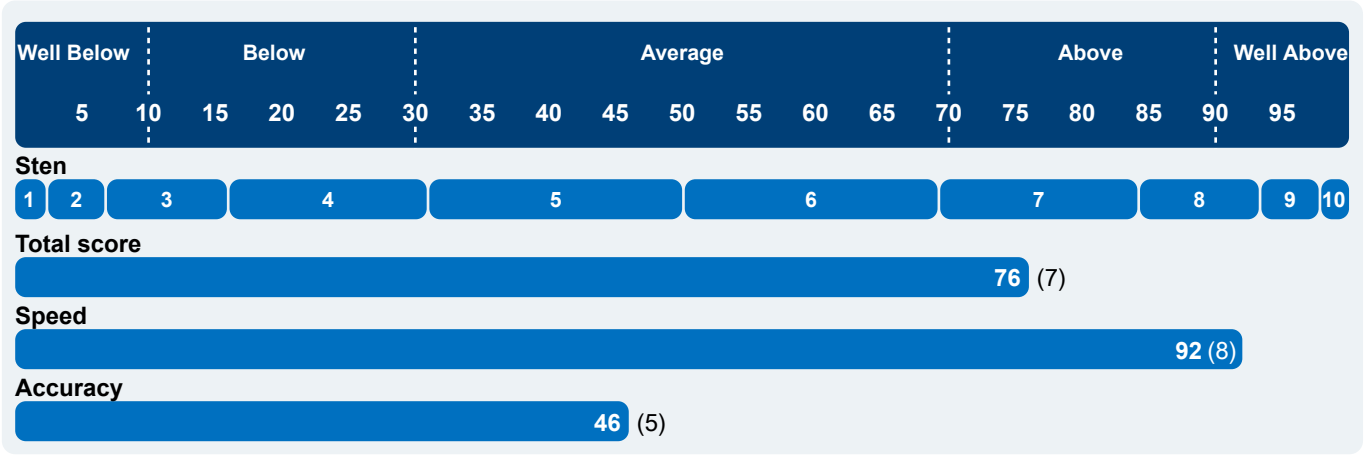
1. Test results

1.1 Key test results

The graph below shows [redacted] van Kampen's overall general ability score and speed and accuracy scores. The scores are shown as percentiles (percenta the norm group that a score comes above) and as stens (standardised score presented on a 1 – 10 scale).

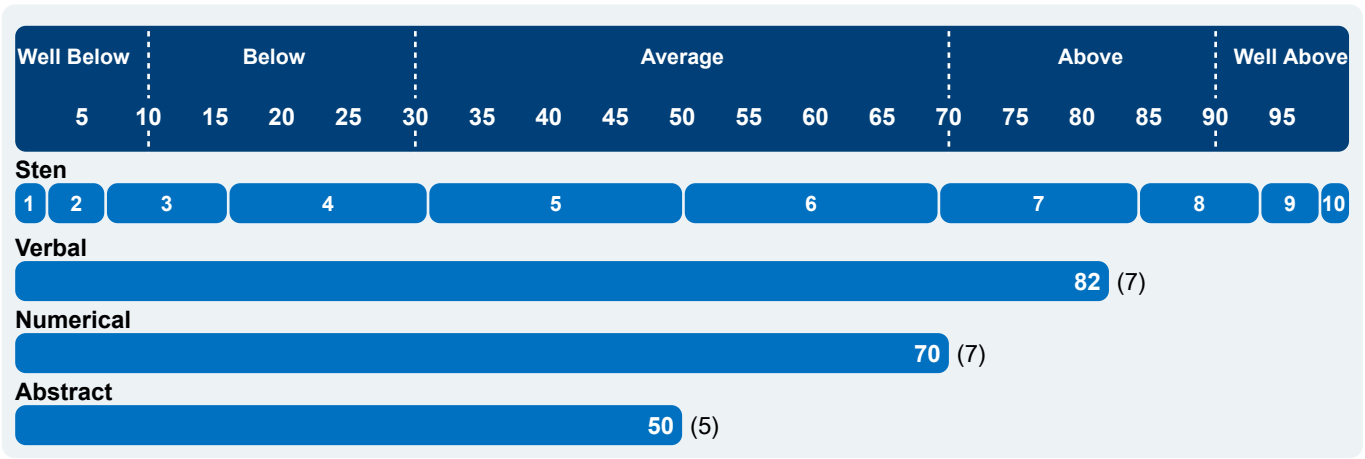


[redacted] van Ka **total score** on the Logiks General (Advanced) test was **above average** compared to the norm gr his ests that [redacted] van Kampen's general reasoning ability is better than that of most others in the comparison group. [redacted] van Kampen is th e likely to demonstrate high levels of mental agility in a variety of contexts.

[redacted] van Kampen's **speed scor** well **above average** and [redacted] van Kampen's **accuracy score** was **average** compared to orm group. This means that [redacted] van Kampen adopted a v gh work rate compared to others and worked as accurately as most.

1.2 Detailed breakdown of scores

'The graph below shows [redacted] van Kampen's performance on the three sub-tests of the Logiks General (Advanced) test. The scores are shown as per es (percentage of the norm group that a score comes above) and as stens (standardised score presented on a 1 – 10 scale).



[redacted] van Kampen's performance on the **verbal** sub-test was **above average** compared to the norm group. This suggests that van Kampen's ability to work with and understand information presented in the form of written text is better than that of most s in the comparison group.

[redacted] van Kampen's performance on the **numerical** sub-test was **above average** compared to the norm group. This suggests that van Kampen's ability to work with and understand numerical information is better than that of most others in the comparison .

[redacted] van Kampen's performance on the **abstract** sub-test was **average** compared to the norm group. This suggests that [redacted] van en's ability to work with and understand information presented in the form of diagrams is as good as that of most ot the comparison group.

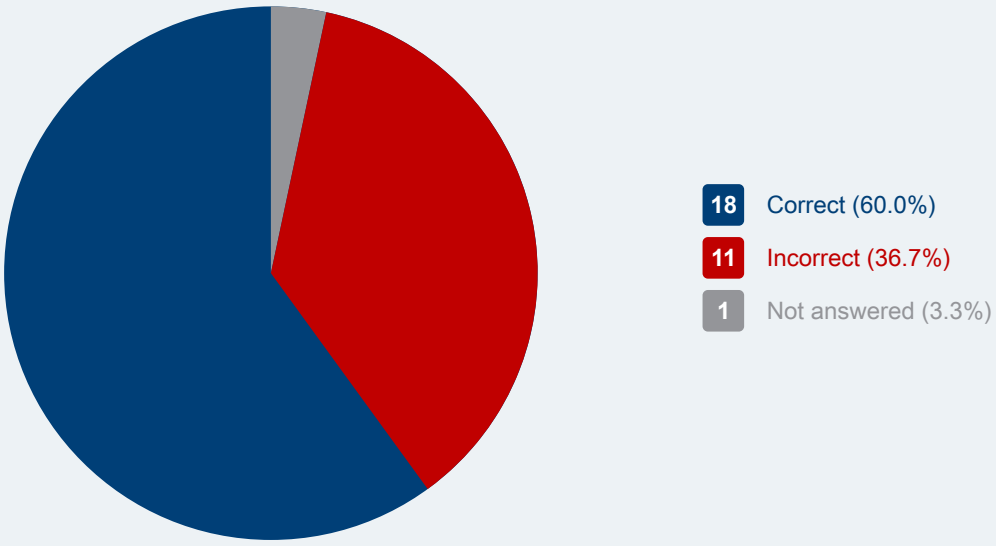
2. Pattern of test answers

2.1 Test responses overall

This chart provides a breakdown of [redacted] van Kampen's test responses. It shows the number of questions in the overall test that were answered correctly, incorrectl not answered.



2.2 Test responses for the sub-tests

[redacted] van Kampen's responses to each of the three sub-tests are shown below.

6 Correct
5 Incorrect
1 Not answered

VERBAL (12 questions)
Question number
1 2 3 4 5 6
7 8 9 10 11 12

5 Correct
3 Incorrect
0 Not answered

NUMERICAL (8 questions)
Question number
1 2 3 4
5 6 7 8

7 Correct
3 Incorrect
0 Not answered

ABSTRACT (10 questions)
Question number
1 2 3 4 5
6 7 8 9 10
